THE STAGES OF AIR PURIFICATION

CAPTURE

PRE-FILTER STAGE

The pre-filter stage catches the largest particles as room air is drawn through the intake chamber.

PROPRIETARY HEPA-Rx FILTER

The HEPA-Rx filter captures >99.9% of the ultrafine particulates down to 0.0025 microns in size.

DESTRUCTION

ACTIVATED CARBON FILTER

The activated carbon filter adsorbs VOCs (Volatile Organic Compounds) - noxious odours, chemicals and gases.

UV-C+ LAMP

The UV-C+ Lamp is implemented to eliminate (reduce the concentration of) airborne pathogens.

RE-ENERGIZE

REVITALIZING NEGATIVE ION CHAMBER

Before the pure, clean air is circulated back into the room, the air is revitalized with negative ions.

Studies have shown that Negative ions increase the flow of oxygen to the brain; resulting in higher alertness, decreased drowsiness and more mental energy.*
